

Group Number - 10

Group Members -

- 1) Mansi Sunil Kurhe
- 2) Abhay Babasaheb Narsale
- 3) Aditya Madhav Madhavi
- 4) Pratik Ganesh Lagad
- 5) Kshitija Arun Matale

Domain -

Topic Name - Trip Management

Company Name - Edunet Foundation

Guide Name - Prof. P.S. Hase

• Day 1-2

(Date 30/12/2025 to
31/12/2025)

• Topic covered :

- Version control and it's types
- Git basic and operations
- Collaboration using GitHub

• Description :

During the 1st two days of internship, we learned about version control system and their importance in software development. It is a system that helps developers track manage changes made to source code over time on Day 1, 1- Local version control system - stores version of files on a local computer.

2 - centralized version control system - uses a central server to store all project files.

3 - Distributed version control system - Every development a full copy of the project repository.

On Day 2, we learned basic Git operations like adding, initializing, viewing logs etc.

Prof. P.S. Hase
[Internship Guide]

• Day 3-4 (Date: 1/1/2026 to 2/1/2026)

• Topic covered:

- HTML basic introduction
- Structure of an HTML document
- More HTML element

• Description:

On Day 3 and 4 of our internship, we learned about HTML which is the standard lang used to create web pages.

On Day 3, we learned the fundamental of HTML including,

- Structure of HTML document
- Heading (`<h1>` to `<h6>`)
- Paragraph (`<p>`)
- Line breaks (`<br>`)
- Horizontal line (`<hr>`)

On Day 4,

- Links (Ordered `<ol>`, unordered list `<ul>`)
- Links Using `<a>` tag
- Image Using `<img>` tag
- Table (`<table>`, `<tr>`, `<th>`, `<td>`)
- Forms (`<form>`, `<input>`, `<label>`, `<button>`)

• Day 5-6 (Date 3/11/2026 to 5/11/2026)

- Topic covered:
 - Types of CSS
 - CSS Syntax
 - CSS properties
 - Styling

• Description:

On Day 5 and 6 we learned about CSS, which is used to style and Design web pages. CSS is responsible for the appearance and layout of the website.

On Day 5,

What is CSS and why it is used?

Types of CSS

- a) Inline CSS
- b) Internal CSS
- c) External CSS

CSS syntax, color properties, Margin, Padding

On Day 6,

Box model content, padding, border, margin

Display properties (block, inline)

Positioning (static, relative, absolute, fixed)

Flexbox Basic

Adding hover effects

• Day 7-8

(Date 6/1/2026 to 7/1/2026)

- Topic Covered :

- JavaScript function and function expression
- Hoisting in Javascript
- Events and Event handling

- Description:

On Day 7, fundamentals of Javascript

- Introduction to JS and It's role in web development
- Ways to include JS in HTML
- Variables
- Operations
- Conditional statements
- Basics input and output using alert ()
prompt() and console.log()

Day 8, explored more practical concepts

- Functions
- loops (for while)
- Events (on click, onsubmit)
- Dom (Document object model) manipulation
- Changing content and style using JS
- Basic form validation

Prof. P.S. Hase
[Internship Guide]

• Day 9-10 (Date: 8/001/2026 to 9/01/2026)

• Topic covered :

- Basic Python
- Variables and types
- function and their importance
- file handling

• Description:

Python which is high-level, interpreted program language widely used in web development data science etc.

On Day 9, we studied the basic of Python, including:

- Introduction to python and basic of python.
- Installing and setting up python environment
- Variables, Data Types
- operations
- Conditional statements

On Day 10, we explored more programming concepts like

- Loops
- Break and continue statements
- function and their importance
- Lists, and Tuples, Dictionaries
- Basic string operation.

• Day 11-12 (Day: 10/01/2026 to 12/01/2026)

• Topic covered :

- Introduction to Django framework
- Understanding MVT (Model-View-Template)
- Features of Django.
- Installation of Django using pip
- Creating a Django project
- Running the development server.

• Description:

On Day 11 and 12 we have introduced to Django, a high level python web framework used for developing secure and scalable web applications. We learned MVT architecture, which separates application into model, view and Template components for further better organization and maintainability. We installed Django using pip and created our first Django project. We also understand purpose of importance project file such as manage.py, settings.py and urls.py finally, we successfully ran the Django develop server and viewed the default Django page in browser which gave us our first hands on experience with Django.

• Day 13-14

(Date: 13/01/2026 to
14/01/2026)

• Topic covered:

- Creating an application using Django
- Understanding app structure
- Django migration (makemigration and migrate)
- Database migration (make connection)
- Building backend topic using views
- Registration and login module implementation.

• Description:

During Day 13 and 14, we learned how Django projects are divided into applications for better modular development. We created new apps and explored their internal structure. We learned how to connect Django with the database and performed migration to create a database tables. We implemented backend logic through views and worked on creating basic registration and login modules. These sessions helped us understand how Django handles user data, authentication and database interaction. This improved our understanding of real-world backend system development.

Prof P.S. Hase
[Internship Guide]

• Day 15-16

(Date: 15/01/2026 to
16/01/2026)

• Topic Covered:

- Creating and using HTML templates in Django
- Connecting frontend with backend
- Passing templates tags and template
- Django templates tags and template
- Practical implementation of learned concept
- Group project development work

Description:

On Day 15 and 16, we focused on integrating frontend and backend using Django Template. We created HTML templates and connected them with backend views to display dynamic data. We learned how Django template language helps in rendering backend data on web pages.

Along with learning new concepts, we also started working on our group projects and applied concepts practically. This helps us to understand how full-stack web application functionally by combining frontend and backend components.

• Day 17-18 (Date: 17/01/2026 to 18/01/2026)

• Topic covered:

- Group project development and backend implementation.
- Introduction to REST framework and usage
- Understanding API's and backend communication.
- EY export session on prompt Engineering
- Group project completion and presentation.

• Description:

During Day 17 and 18, we mainly focused on developing our group project and applying concepts learned during the internship. We were introduced to the REST framework and understand and API creation. This helped us learn how web application communication happens with server. We also attend EY export session on prompt engineering, which introduced us to modern AI interaction techniques. We completed our group project and prepared for the final presentation.

• Day 19-20 (Date: 19/01/2026 to 20/01/2026)

• Topic covered:

- Group project presentation
- Professional communication skills.
- Employability skills development.
- Interview and workplace communication
- Confidence building and Networking awareness
- Feedback session and career guidance

• Description:

On Day 19 and 20 we presented our group project and demonstrated the concepts we had learned during the internship.

These presentation helped us improve our technical explanation and communication skills. we also attended EY sessions on professional communication, employability skills, and workplace readiness.

These sessions focussed on improving interview skills, confidence building and professional behavior in corporate environment. The mentor also provide valuable feedback and career guidance. These final session helped us prepared for future internship and professional opportunities.
